Flagged Values and Notes

LDL cholesterol is 142 mg/dL (reference under 100), a borderline high reading that has trended up across three years (128, 135, 142). Family history of high cholesterol on the paternal side is noted. Recommendation: diet and exercise first, with more soluble fiber and less saturated fat, and a recheck in August 2026 before considering medication.

Vitamin D is 28 ng/mL (reference 30 to 100), low but improving year over year (22, 25, 28). A daily vitamin D supplement has been started, with recheck at next labs.

Blood pressure (118/76), resting heart rate (58), A1C (5.4 percent), and remaining markers are within range. Non-smoker.
